Your AI roadmap

Your business mapped, the automations that suit you, and what each one saves over 12 months.

This is an example report. The business and every figure in it are illustrative, to show what you receive after your free session.

Prepared for
Example Co, a 14-person trade supplier

Prepared by
Dan Kovac, Roadmap Labs

Delivered
Within 48 hours of your session

Five automations worth $40,560 a year, starting with quote follow-ups

In the session we talked through where the time goes and where you want the business to be. This report maps how the work runs today, ranks the automations that suit you, and puts a 12-month figure on each one.

TIME ON THESE TASKS TODAY

17.5 hrs

a week, across the team

WHAT THAT COSTS TODAY

$54,600

a year, at $65 an hour

SAVING OVER 12 MONTHS

$40,560

13 hours a week back

What you told us

- Quotes go out, then nobody has time to follow them up.
- The CRM, the inbox and the accounts system don't talk to each other.
- Some of the team use AI every day and some don't use it at all.

What we recommend

- Keep the systems you have. Every automation here builds on them.
- Start with quote follow-ups. It has the biggest saving and the least risk.
- Build one at a time, and train the team on each before the next.

HOW WE WORK OUT EACH FIGURE

Hours saved each week × the hourly cost of the people doing the work × 48 working weeks. Time rarely goes to zero, so every saving assumes a person still checks the output.

How the work runs today, from first enquiry to repeat customer

We map the business from your customer's point of view, in four stages. Under each one are the tasks your team does today, the tools they use and the hours they take.

STAGE 1

Acquisition and reach

Referrals, Google and ads run by an outside agency.

Weekly reporting — 2 hrs

TOOLS: ADS ACCOUNT, SPREADSHEETS

STAGE 2

Sales and proposals

Enquiries become quotes, and quotes become orders.

Following up quotes — Start here — 6 hrs

Building proposals — 5 hrs

TOOLS: CRM, INBOX

STAGE 3

Delivery

Orders are scheduled, delivered and invoiced.

Matching invoices — 3 hrs

TOOLS: ACCOUNTS SYSTEM, INBOX

STAGE 4

Retention and business health

Keeping customers informed and coming back.

Client updates — 1.5 hrs

TOOLS: INBOX, PHONE

What's working

The sales process wins work, and customers stay. These are the systems that got you here, so we build on them.

Where it leaks

Most of the lost time is in stage 2. Quotes are written by hand and followed up from memory.

Every automation, ranked by what it saves over 12 months

You pick what to build. We'd start at the top and work down, one at a time.

#	AUTOMATION	HOURS A WEEK NOW	AFTER	EFFORT	SAVING OVER 12 MONTHS
1	**Quote follow-ups** Top value Drafts each follow-up from the quote and the customer's history, ready for a person to send.	6	1.5	Small	**$14,040**
2	**Building proposals** Writes the first draft from the enquiry, your price list and past jobs like it.	5	1.5	Medium	**$10,920**
3	**Invoice matching** Matches supplier invoices to orders and flags the ones that don't agree.	3	0.5	Medium	**$7,800**
4	**Weekly reporting** Pulls the week's numbers from ads, sales and accounts into one page.	2	0.5	Small	**$4,680**
5	**Client updates** Drafts order and delivery updates for the team to check and send.	1.5	0.5	Small	**$3,120**
	Total	**17.5**	**4.5**		**$40,560**

Worked example for row 1: 4.5 hours saved a week × $65 an hour × 48 weeks = $14,040. Effort is a guide to the size of the build: small, medium or large.

WHAT IT COSTS TO RUN

There are two running costs: subscriptions and tokens. A team account usually runs at around $100 a month per employee, and token costs depend on the automations you build. We design each one to run at the lowest cost that gets the right result.

SECURITY

We look at your current tech stack first and flag any risk we see along the way. You decide whether to fix it with your IT provider, or we can help with that too.

First build: quote follow-ups

It's the process that already wins you work, done faster. Nothing new for the team to learn, and no new system.

TODAY

1. A quote goes out from the CRM.
2. Someone remembers to chase it, or doesn't.
3. Each follow-up is written from scratch.

Time each week **6 hours**

WITH THE AUTOMATION

1. A quote goes out from the CRM, as it does now.
2. A follow-up is drafted on the right day, using the quote and the customer's history.
3. A person checks it and sends it.

Time each week **1.5 hours**

STEP 1

Scope

We agree the scope and price before work starts.

STEP 2

Build

On the systems you already have. Accounts stay in your name.

STEP 3

Test

With the people who'll use it, on real work.

STEP 4

Train

We hand it over and train your team to use it.

It's your call from here

BUILD IT WITH US

Pick the automations worth doing. A typical engagement ranges from $5,000 to $50,000, depending on what we're building. Afterwards there's an optional retainer to keep it all running and find new opportunities.

OR RUN IT YOURSELF

This report is yours. Build it with your team or take it to another provider. There's no lock-in and no obligation.
